

## **SynergEyes Hybrid Contact Lenses**

Remember when you had only two choices in contact lenses? "Hard" (rigid gas permeable) lenses were best for crisp, clear vision, but were often irritating and uncomfortable. Soft lenses were the most comfortable, but often provided less-than-optimal vision. Now, a technological breakthrough makes having to choose a thing of the past.

SynergEyes® hybrid contact lenses offer the best of both worlds. The soft skirt offers all day comfort while the "breathable" rigid center keeps eyes healthy while providing crisp, clear vision...even at night.

SynergEyes® offers a wide variety of hybrid contact lenses to meet your visual needs. Whether you have Astigmatism, need vision correction for distance, close up, reading or to help correct keratoconus, SynergEyes® contact lenses will provide you with comfortable and crisp vision all day long.

## **SynergEyes Hybrid Contact Lenses for Keratoconus**

SynergEyes utilizes revolutionary hybrid technology, combining the crisp vision of a high-oxygen rigid gas permeable (RGP) contact lens with the all-day comfort and convenience of a soft lens. It's the best of both worlds!

Whether you wear traditional soft or rigid contact lenses, or if you are wearing both at the same time, you may have experienced...

- Poor, unstable vision
- Discomfort
- Contact lens dislodge
- Decreased contact lens wearing time
- Light sensitivity and glare
- Inconvenience
- Poor eye health

Now, with SynergEyes hybrid contact lenses, having to choose between comfort and visual clarity is a thing of the past. SynergEyes lenses for keratoconus are *the comfortable way to clear vision.*<sup>™</sup>

SynergEyes contact lenses for keratoconus are custom designed to meet your vision correction needs. SynergEyes® has developed a family of lenses to address all stages of keratoconus. Whether you have an early, moderate, or advanced stage of keratoconus, SynergEyes has a lens that will deliver clear vision and comfort for you.
